

Chondrofix® Osteochondral Allograft Coding Reference Guide

Chondrofix® Osteochondral Allograft is a decellularized allograft consisting of hyaline cartilage and cancellous bone. As a minimally manipulated human tissue graft, the Chondrofix Osteochondral Allograft undergoes a proprietary processing protocol resulting in a shelf-stable graft that retains relevant inherent structural properties and provides an effective alternative to fresh allograft or autograft for the repair of osteochondral lesions.
