

Gel-One[®] Cross-Linked Hyaluronate Easy-to-Use

Gel-One[®] is **easy-to-use** as a **single injection** with only **3 mL treatment volume**.¹

A Single Injection 3mL Gel

Gel-One is a sterile, transparent, viscoelastic hydrogel approved for the treatment of pain in osteoarthritis (OA) of the knee. The unique cross-linking process enables increased viscoelasticity, which serves to provide pain relief and improved knee function.

It provides a joint-friendly treatment **requiring only 3 mL for effective treatment¹ and chondroprotection.²**

Only One Visit Needed

In a laboratory study, a single-dose injection of Gel-One **exerts chondroprotective effects plus long-lasting analgesia in the joint pain model**, suggesting the beneficial multimodal function of Gel-One for symptomatic OA patients.²

Gel-One is a patient-friendly treatment option that **requires only one visit for effective pain relief**, which may be preferable for patients who are trying to minimize their interactions with those outside their home.

Indications For Use: Gel-One Hyaluronate is indicated for the treatment of pain in osteoarthritis (OA) of the knee in patients who have failed to respond adequately to non-pharmacologic therapy, nonsteroidal anti-inflammatory drugs (NSAIDs) or simple analgesics, e.g., acetaminophen.

Important Safety Information: Before using Gel-One Hyaluronate, ask your patients if they are allergic to hyaluronan products, cinnamon, or products from birds, such as feathers, eggs, and poultry. Gel-One Hyaluronate is only for injection into the knee, performed by a doctor or other qualified healthcare professional. Gel-One Hyaluronate injection should not be used in the presence of skin disease or infection around the area where the injection will be given. Gel-One Hyaluronate has not been tested to show pain relief in joints other than the knee or for conditions other than OA. Gel-One Hyaluronate has not been tested in patients who are pregnant, mothers who are nursing, or anyone under the age of 21. Strenuous or prolonged weight-bearing activities after treatment are not recommended. The effectiveness of repeat treatment cycles of Gel-One Hyaluronate has not been established. The side effects most commonly seen after injection of Gel-One Hyaluronate in the clinical trial were knee pain, swelling and/or knee effusion. These reactions are generally mild and do not last long. For complete instructions for use, see the package insert and visit www.zimmerbiomet.com. Gel-One Hyaluronate is indicated for the treatment of pain in osteoarthritis (OA) of the knee in patients who have failed to respond adequately to non-pharmacologic therapy, non-steroidal anti-inflammatory drugs (NSAIDs) or simple analgesics, e.g., acetaminophen.
