

Persona® Partial Knee System

Personalized Implants

In some cases, osteoarthritis only occurs in one compartment (portion) of the knee. For knees that are otherwise healthy, partial knee replacement can preserve the portions of your knee, cartilage and ligaments that are healthy.

Getting a precise knee implant fit is an important key to your comfort and overall experience following partial knee replacement. The Persona Partial Knee has compartment specific shapes based off the Persona® Total Knee, which has the finest sizing increments available¹. This gives your surgeon a comprehensive selection to choose from, personalizing the balance and fit for each patient.

Is a partial knee right for you?

If you and your doctor are discussing treatment options for your knee pain, you may be a candidate for partial knee replacement. The advantage of a partial knee is that it resurfaces only the damaged bone and cartilage of the knee, preserving the undamaged portions. And, because partial knee replacement repairs only one side of the knee, it's much smaller than a total knee implant. Potential benefits of partial knees include less pain² and a more rapid recovery³⁻⁵ compared to total knee replacement.

Proven technologies⁶⁻¹⁰

The bearing, the plastic portion of the implant, is infused with Vitamin E, which is a powerful antioxidant that guards against wear⁶ and prevents breakdown⁷⁻¹⁰ of the important polyethylene bearing surface.
