Cementing Your Confidence

Zimmer, a leader in orthopaedics, is cementing confidence with a low viscosity version of PALACOS® Bone Cement available with or without Gentamicin. PALACOS LV and PALACOS LV+G Bone Cements are based on the same time-tested raw materials of PALACOS R and PALACOS R+G Bone Cements, with the same unique green color. Because of its lower viscosity, PALACOS LV and LV+G are easy to eject from cartridge mixing systems and from long, narrow nozzles used in some orthopaedic procedures.

Other key features include:

- Excellent strength characteristics
- High visualization
- Easy injection from cartridge mixing systems
- Ideal for use with shoulders and elbows
- Clinically proven antibiotic with broad spectrum of kill

Cementing with confidence starts with PALACOS Bone Cement – the ideal choice for orthopaedics.
Ordering Information

<tr>
<th>Bone Cement</th>
<th>Quantity</th>
<th>Prod. No.</th>
</tr>
</thead>
<tbody>
<tr>
<td>PALACOS LV</td>
<td>1 x 40 (single dose)</td>
<td>00-1118-140-01</td>
</tr>
<tr>
<td>PALACOS LV+G</td>
<td>1 x 40 (single dose)</td>
<td>00-1119-140-01</td>
</tr>
</tbody>
</table>

Excellent Bending Strength
PALACOS LV and PALACOS LV+G Bone Cements demonstrate excellent bending strength compared to other commercially available cements.

High Visualization
PALACOS Bone Cement’s green color provides improved visualization of the cement in comparison to bone.
