The Quick-Vac Vacuum Mixing Bowl from Zimmer Biomet offers a simple yet high performance system to mix bone cement. The Quick-Vac Mixing Bowl is designed to efficiently mix bone cement in a vacuum environment to reduce its porosity\textsuperscript{1,2} and minimize monomer fumes.
Quick-Vac Mixing Bowl
The Quick-Vac Mixing Bowl has been thoughtfully designed for simplicity and performance in vacuum mixing any type bone cement.

• **Performance**
  The planetary gear system moves the mixing paddle in a constantly changing path to thoroughly mix the monomer and powder components of the bone cement. One turn of the handle produces one and a half turns of the mixing paddle.

• **Visualization**
  The transparent bowl allows for easy viewing of the mixed bone cement.

• **Ergonomic Design**
  Its geometry makes handling of the bowl easy whether holding the bowl in the hand while mixing or holding the bowl on a surface. The spatula is designed to match the bowl contours.

• **Large Capacity**
  The mixing bowl can hold up to three (3X40g) doses of bone cement.

• **Multi-function Tubing Set**
  The unique vacuum tubing set utilizes a filter to reduce monomer fumes and a vacuum indicator showing when vacuum has been achieved and mixing can begin.
