Signature™ Personalized Patient Care
for **Comprehensive Total**
and **Reverse Shoulder Systems**

Product Brochure

BIOMET

SPECIFICALLY CREATED FOR YOUR PATIENTS

With each patient-specific Signature™ guide, the surgeon will receive a bone model created from each patients' unique anatomy. The bone model allows for preoperative surgeon evaluation and intraoperative verification.

THE **SIGNATURE**™ GLENOID SYSTEM

Multiple Targets. Same Results.

SURGEON DESIGNED. PATIENT MATCHED.

The Signature™ Glenoid system is a patient-specific surgical positioning guide which offers a unique and tailored approach to shoulder arthroplasty. Using three dimensional CT imaging technology, these guides are created and based upon each patients' unique anatomy, offering personalized patient care and pin-point accuracy for both anatomic and reverse shoulder arthroplasty.

INTERACTIVE PREOPERATIVE PLANNING

- Patient-specific images are featured for both anatomic and reverse procedures.
- The planning suite details the suggested position, orientation and size of each implant.
- Preoperative changes can be made by the surgeon and updated by the Biomet Signature™ team to create a customized plan for every patient.

Reverse Plan

LET SIGNATURE™ GUIDE YOU

Glenoid Sizer

Low-profile design facilitates insertion into the joint, allowing for visualization and accurate placement

ACCESS GLENOID INSTRUMENTATION

Multiple Targets. Same Results.

STREAMLINED 4-STEP APPROACH

Cannulated, compact and low-profile, the Comprehensive Access glenoid instruments are designed to simplify glenoid preparation, while providing surgeons unmatched visibility to the joint.

Peripheral Peg Guide

The hex-shaped quick connection provides multiple handle placement options

2-in-1 Regenerex Post Reamer

Prepares the glenoid boss and post in one simple motion

Glenoid Reamer

Reduced geometry reamer for improved visualization and easy entry into the joint

REDUCING COMPLEXITY WITH IMPROVED DESIGN

Eliminate the need for anti-rotation pegs. The quick-connect drill bits attach magnetically, streamlining peripheral peg preparation.
